Dear Children's Environmental Health Collaborative,

OpenAQ is pleased to partner with UNICEF's Children's Environmental Health Collaborative (Collaborative). We are a civil society organization that aggregates open air quality data from across the globe onto an open-source data platform so that anyone concerned about air quality has unfettered access to the data they need to analyze, communicate and advocate for clean air.

Air quality data supports a wide array of activities that can improve children's health, from health studies that examine how children are uniquely susceptible to air pollution, to communications that raise awareness of how air pollution is disproportionately impacting children, to community and government interventions that reduce the sources of air pollution most harmful to children.

OpenAQ supports the Collaborative's mission and will:
- highlight the Collaborative as a Partner on our website
- promote relevant Collaborative activities and publications via our social media channels when asked
- support Collaborative-led initiatives that have an air quality data component (e.g., webinars)
- provide training on how to use the OpenAQ data platform to larger audiences and otherwise share our technical expertise

OpenAQ will strive to be responsive and will be transparent about what we can and cannot do within our limited capacity.

We thank the Collaborative for bringing together diverse perspectives, expertise, networks and ideas and for cross-promoting OpenAQ activities and publications that are relevant to the Collaborative's mission.

Sincerely,

CHagerbaumer

Chris Hagerbaumer
OpenAQ Executive Director
